

SMART Dimension
Correction

SMART Dimension Correction

Correct analytics in your
documents and reporting

The solution is designed to provide simplicity and speed
of correction of errors in accounting documents and transactions.

SMART DIMENSION CORRECTION FUNCTIONALITY

Automatic creation of functionality settings

The functionality will independently find and offer all tables – both standard and developed for the client – which provide accounting in the context of analytics.

Easy Analytics Adjustment

To correct errors in analytics accounting, it is no longer necessary to reverse and post new documents. The functionality will automatically find all the necessary entries in all recorded documents and transactions by document number and date and apply new values of Dimensions (analytics).

Change protocol

All analytics adjustments using the SMART Dimension Correction functionality are recorded in a separate change log, which, if necessary, can be canceled to previous values.

Who needs the SMART Dimension Correction app

All companies that use the standard functionality of Dimensions in Business Central and need to simplify the correction of measurement values in accounting documents and transactions.
